# K-Pop Data Analysis

Christine P. Chai cpchai21@gmail.com

January 18, 2025

Starting in 2024.

## **Executive Summary**

Write something here

## Disclaimer

This manuscript is written solely by the author, not by ChatGPT or any other generative AI. The opinions and views expressed in this manuscript are those of the author, and do not necessarily state or reflect those of any institution or government entity.

## 1 Introduction

Important: Write about why K-Pop music is so popular across the globe.

K-Pop music has emerged popularity worldwide since the early 2010's (Khiun, 2013; Sun, 2022).

Then write about the author's motivation

The author became interested in K-Pop music (Korean pop music) from the debut of Tzuyu (Chou Tzu-Yu, 周子瑜).<sup>1</sup>

Tzuyu is originally from Taiwan, the country in which the author grew up. In 2015, Tzuyu participated in the South Korean reality television show SIXTEEN, and eventually got added to the newly-formed girl group TWICE.

Later that year, ...

Describe the flag controversy incident.<sup>4</sup>

(a lot more content here)

Important: Write about the K-Pop scandal revealed in 2019 and later.

### 1.1 Technical Narrative

This manuscript is created using R Markdown (Allaire et al., 2024)<sup>5</sup> for reproducible data analysis, just like our earlier technical report about the education in Taiwan (Chai, 2024). We have posted our code and data on GitHub,<sup>6</sup> so readers can download the GitHub repository and play with the script themselves.

The rest of this manuscript is organized as follows.

e.g. Chapter 23 does something.

#### 1.2 Read in the *Idol School* Dataset

Idol School (偶像學校) (2017)

Motivation: One of the contestants, Snowbaby (蔡瑞雪),<sup>7</sup> is also from Taiwan. In fact, Snowbaby<sup>8</sup> graduated from Taipei First Girls' High School,<sup>9</sup> the same high school as the author did.

Emphasize that *Idol School* did not require vocal or dance experience and was willing to train the participants from scratch. Despite the low barrier to entry, many participants in the reality show had previously trained under various entertainment companies.

In the live reality show  $Idol\ School$ , nine winners were selected to form the girl group  $fromis\_9$ . This girl group debuted in 2018 and remained active until the contract ended in 2024.

#### Need to write the data description

Wikipedia data: https://en.wikipedia.org/wiki/List\_of\_Idol\_School\_contestants

We manually copy-pasted the contestant data from Wikipedia into an Excel workbook (.xlsx), and used the R package readxl (Wickham and Bryan, 2023) to load the dataset.

#### Why didn't we store the dataset in .csv format?

For Chinese characters and having multiple data sheets in the same Excel file for consolidation.

Since the English translation of Korean names look similar to each other (Kim, 2020), we also include the date of birth (DOB) to make it easier to uniquely identify each contestant. For those who are able to read Chinese, we put each contestant's name in Chinese characters as well.

## 1.3 *Idol School*: Exploratory Data Analysis

Context: Write about how the vocal, dance, and physical scores were evaluated.

Physical testing contains a group exercise and an individual exercise.

Also mention the top performers in each category.

#### What changes did we make from the Wikipedia data?

Our presumption is that in each category, no two contestants should have the same score. However, after sorting the *Idol School* data by the physical scores, we found two 3.5's and two 1.2's. Especially that the two 3.5's belong to top-ranked contestants Bae Eun Yeong (裴思英) and Park Ji Won (朴池原), this issue quickly caught our attention to make corrections to the data.

Physical: We found two 3.5's and two 1.2's after sorting the scores.

In the video clip, Park Ji Won (林池原) and her partner were the first runner-up in the group physical exercise. 11 We are surprised that Ji Won's physical score was only 3.5. According to the video's score table

 $<sup>^{11}\</sup>mathrm{Screenshot}$  of the group physical exercise: https://bit.ly/4a7QT9m

for contestants ranked 11th to 20th, <sup>12</sup> Ji Won's physical score should be 6.2. The Wikipedia table shows an inconsistency in Ji Won's overall score, i.e., the average across the three categories. Ji Won's vocal score was 7.9, and her dance score was 5. These numbers seem to be reasonable for Ji Won, because she is known for excellent singing and good dancing as a performer. <sup>13</sup> Therefore, we assume both scores to be correct. If the physical score had really been 3.5, then Ji Won's overall score would be 5.47, dropping her from 13th place to the 18th. If the overall score of 6.37 had been correct, then Ji Won's physical score should be 6.2. The second scenario is more likely to be true, given the evidence we found in the video clip. Hence we corrected Ji Won's physical score to 6.2.

## Physical: We found additional two 1.2's after sorting the scores.

The two 1.2 scores are more difficult to check for the underlying values, probably because they occurred in two contestants of lower ranking. The two contestants, Jessica Lee (李瑟) and Michelle White (懷特·朱雪兒), ranked in the lower half of all 41 contestants in terms of the overall ability test. Both of them got eliminated in the first round, so they did not receive much attention in the show. With the help of Google Translate, we were able to translate the image of Korean text to (readable) English. Finally, we discovered that Michelle White's physical score should be 1.3, not 1.2.

Idol School (2017): Videos with subtitles in Simplified Chinese are available on the Bilibili platform. 16

#### Screenshots saved:

### Still need to write the description

```
vocal_sorted = sort(idol_school$Vocal, decreasing = TRUE)
dance_sorted = sort(idol_school$Dance, decreasing = TRUE)
physical_sorted = sort(idol_school$Physical, decreasing = TRUE)

# UNFINISHED HERE
combined_all_three = cbind(vocal_sorted, dance_sorted, physical_sorted)
sorted_scores_df = as.data.frame(combined_all_three)

sorted_scores_df[1:10,]
```

##		vocal_sorted	${\tt dance\_sorted}$	physical_sorted
##	1	9.8	9.5	10.0
##	2	9.5	9.3	9.8
##	3	8.6	9.0	9.0
##	4	8.5	8.5	8.7
##	5	8.3	8.4	8.2
##	6	8.0	8.0	8.1
##	7	7.9	7.9	8.0
##	8	7.2	7.5	7.5
##	9	7.0	7.4	7.0
##	10	6.5	7.1	6.5

#### Check for the mean and median of each category score

 $<sup>^{12}</sup>$ https://bit.ly/400KUhH

<sup>&</sup>lt;sup>13</sup>Park Ji Won was the main vocalist in *fromis\_9*. https://bit.ly/402yCFI

<sup>&</sup>lt;sup>14</sup>Physical scores of all contestants in *Idol School*: https://bit.ly/3DRNK0Z

 $<sup>^{15} \</sup>rm https://translate.google.com/$ 

<sup>&</sup>lt;sup>16</sup>https://www.bilibili.com/video/BV1554y1C7wj/

```
# UNFINISHED HERE

# Output a table for the mean and median for (vocal, dance, physical)

# Columns: Vocal, Dance, Physical
# Rows: Mean, Median

# Examples:
# mean(idol_school$Dance) # 5.35122
# median(idol_school$Dance) # 5.5

# Rounding to two decimal places?!
```

#### Correlation matrix

Need to explain the correlation coefficients and the K-Pop context.

Diagonal elements are always exactly 1.

Create the scatterplots and/or correlation plots!

Use ggplot or not ?!

- Correlation between vocal and dance scores: 0.68
- Correlation between vocal and physical scores: 0.68
- Correlation between dance and physical scores: 0.54

Trainee at an entertainment company in Korea:

Focus on vocal and dance skills, but not specific physical training. ?! (citation needed)

Theoretically dance and physical should be highly correlated.

Why is the correlation lower between dance and physical scores?

Dance is mainly about technique, not always about the person's physical ability. (citation needed)

Contestants with a remarkably high score in dance but a low score in physical:

```
e.g. Bae Eun Yeong (裴恩英)
e.g. Lee Hae In (李海印)
```

Or because too many contestants did not do well in the physical part?!

```
# UNFINISHED HERE
cor(idol_school[,c("Vocal","Dance","Physical")])
```

```
## Vocal Dance Physical
## Vocal 1.000000 0.6821046 0.6834680
## Dance 0.6821046 1.000000 0.5426207
## Physical 0.6834680 0.5426207 1.0000000
```

Alternatively, we can also obtain the pairwise correlation of each category.

```
# UNFINISHED HERE
cor(idol_school$Vocal, idol_school$Dance)
```

```
## [1] 0.6821046
```

```
# UNFINISHED HERE
# Need to print all three pairs.
# cor(idol_school$Dance, idol_school$Physical)
# cor(idol_school$Vocal, idol_school$Physical)
```

#### 1.4 Idol School: Additional Resources

Students who were eliminated from the show: https://www.ptt.cc/bbs/fromis\_9/M.1555819461.A.C73.html

Someone else used random forests to predict the final ranking: https://shavid.pixnet.net/blog/post/331691281

#### 1.5 Read in the *Produce 48* Dataset

Produce 48 dataset (2018)

Wikipedia data: https://en.wikipedia.org/wiki/Produce\_48

Some former contestants in *Idol School* tried again in the *Produce 48* reality show in 2018.

A total of 12 contestants were eventually selected from Produce~48 to create the time-limited girl group IZ\*ONE, <sup>17</sup> which was active during 2018-2021 in both Korea and Japan.

##	16	松井珠理奈	Matsui Jurina	1997-03-08	В	В	100	

## 2 Tentative Placeholders

Write something here

## 2.1 Test for Non-English Characters

CJK = Chinese, Japanese, Korean

Chinese example

RStudio 有辦法打中文嗎?

```
print("大家好,很高興能認識你們!")

## [1] "大家好,很高興能認識你們!"

Japanese example
思い出にするにはまだ早すぎる

print("みやわき さくら")

## [1] "みやわき さくら"

print("宮脇 咲良")

## [1] "宮脇 咲良")
```

This template does not support Korean characters yet.

## 2.2 R Markdown Narrative

This is an R Markdown document. Markdown is a simple formatting syntax for authoring HTML, PDF, and MS Word documents. For more details on using R Markdown see http://rmarkdown.rstudio.com.

When you click the **Knit** button a document will be generated that includes both content as well as the output of any embedded R code chunks within the document. You can embed an R code chunk like this:

### summary(cars)

```
##
        speed
                         dist
                              2.00
##
    Min.
           : 4.0
                           :
                   Min.
    1st Qu.:12.0
                    1st Qu.: 26.00
##
   Median:15.0
                   Median : 36.00
##
##
   Mean
           :15.4
                   Mean
                           : 42.98
                   3rd Qu.: 56.00
##
    3rd Qu.:19.0
           :25.0
                           :120.00
    Max.
                   Max.
```

## 2.3 Including Plots

You can also embed plots, for example in Figure 1:

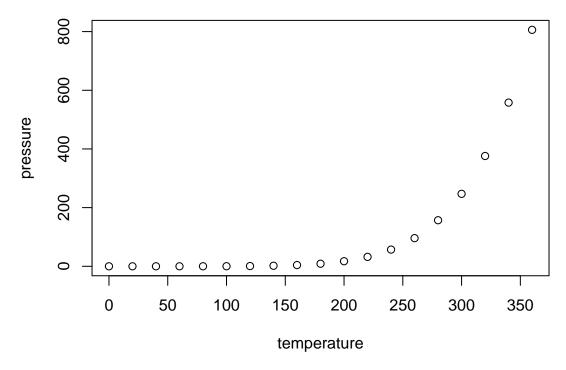

Figure 1: Test Plot

Note that the echo = FALSE parameter was added to the code chunk to prevent printing of the R code that generated the plot.

## Acknowledgments

The author is immensely grateful to her significant other, Hugh Hendrickson, for providing his support in the author's professional development.

Technical discussions: Cheng-Shun (Adson) Liu and Chih-Kuang (Kevin) Lee.
